Turnover \$36 Million.

IDS SUSTAINABLE FACILITIES

In house washing

Our core strength is our Washing Process, which gives a unique look to the garments we produce. Our Washing Plant is fully equipped for all types of denims and soft washes, making our Productions great value for money with outstanding quality

Dry Processing

Dry process is as much an art as it is a technique to create the distinct character of jeans, based on a customer's individuality.

We work closely with buyers and designers to create the perfect pair of jeans.

Laser Room

Laser machine is another sustainable addition to our fashion canvas of

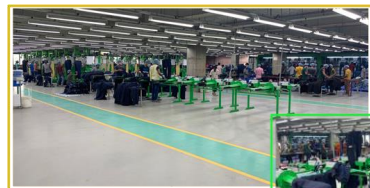

washing units. More than 60% of the dry process is done by the laser machine to avoid bleach and PP spray, which dramatically reduces water consumption.

Wet Processing

These modern washing machines are highly water efficient. We use 74% portable water for reduction, 80% recycle by treated water & 100% treated water for process. IDS runs the state of the art biological waste water treatment plant, which allows us to safely reuse 10% of the water, which will increase 60% by 2022.

Embroidery & Printing

In house embroidery Sima Saki machines and printing available for sampling. Alliances with certified embroidery and printing factories.

FUTURE PLANS

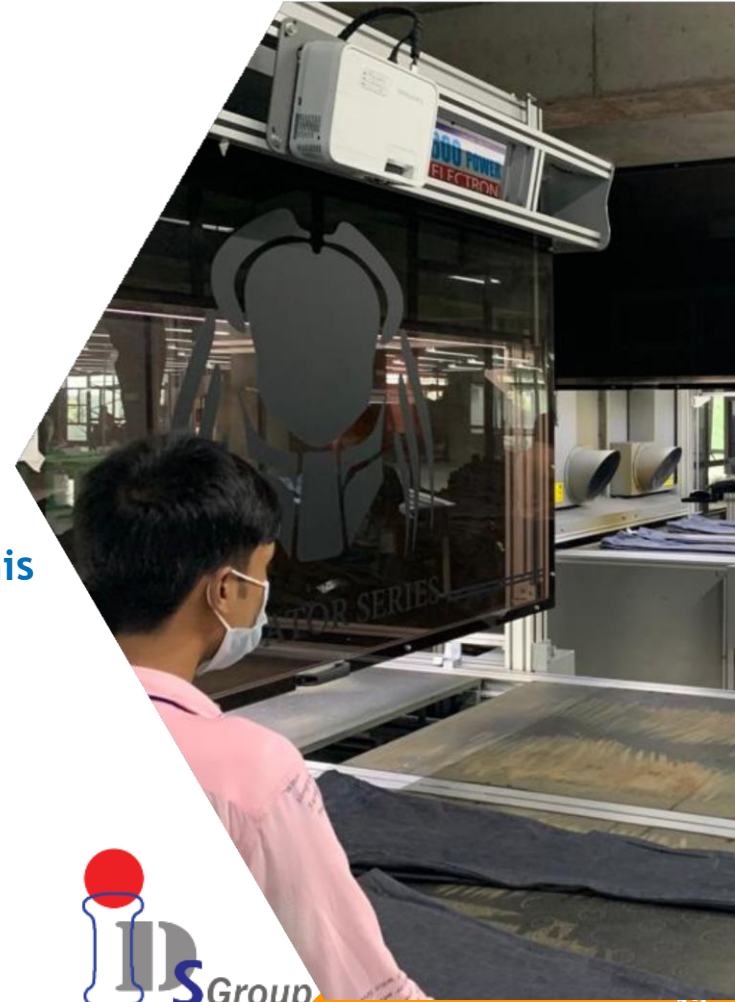

2022-2023

- 8 automated lines will be included in existing facilities to increase productivity and efficiency-FFL Ashulia Unit
- New production facilities are to be introduced within the end of 2022 with the capacity of 15 lines soft woven, which trial production is going on as well as compliance and certification process. – FFL Unit-2, Ashulia.
- 2nd New production facilities to be introduced within 2022, will be started with the Initial capacity of 15 lines from the end of 2022, 8 Storied Building with 240000 SQFT areas are ready to start, we have a plan to expand up to 36 Lines – Fashion 2000 units-2, Konabari, Gazipur, to handle outerwear, Jacket, sportswear, activewear etc.
- Washing capacity will be added 500K per Month from Feb-March 2022
- Lines focused on casual wear as well as denim
- Working towards LEED gold certification

SUSTAINABILITY FOCUS

- ❑ We avoid depletion of natural resources and maintain an ecological balance by adopting the five zero systems developed by jeanologia.
- ❑ We combining laser, ozone, and e-flaw. This has built a sustainable production method and avoid bleaching and PP spraying.
- ❑ We use an Eco-friendly Automatic garments dryer. This maintain the right humidity for garments drying process and automatic conveyor belt system for efficient loading and unloading of our products.
- ❑ Focus on recycled fibres with the aim of migrating existing fabrics.
- ❑ Reduce EIM score from 2020 all fabrics for all our Customers.
